

Abstract

5 Compounds of the formula I

10 in which B, D, E, R, W, Y, Z, b, c, d, e, f, g and h have the meanings indicated in the claims,
 are inhibitors of the adhesion and migration of leucocytes and/or antagonists of the adhesion
 receptor VLA-4 which belongs to the group of integrins. The invention relates to the use of
 compounds of the formula I and of pharmaceutical preparations which contain such
 compounds for the treatment and prophylaxis of diseases which are caused by an undesired
 extent of leucocyte adhesion and/or leucocyte migration or which are associated therewith or
 15 in which cell-cell or cell-matrix interactions which are based on interactions of VLA-4
 receptors with their ligands play a part, for example of inflammatory processes, of rheumatoid
 arthritis or of allergic disorders, and it also relates to the use of compounds of the formula I
 for the production of pharmaceuticals for use in such diseases. It further relates to novel
 compounds of the formula I.
